East Bay Nursery

Canary Island Date Palm

Phoenix canariensis

Height: 60 feet

Spread: 30 feet

Sunlight: ○ ◐

Hardiness Zone: 8b

Other Names: Pineapple Palm

Description:

This variety is widely used as an ornamental plant in warm temperate regions; trim away dead foliage to enhance appearance; will slowly mature into a stately palm and make an excellent landscape focal point

Planting & Growing

Canary Island Date Palm will grow to be about 60 feet tall at maturity, with a spread of 30 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and should not be planted underneath power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This tropical plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America.
