Height: 8 feet

Spread: 6 feet

Sunlight: ○ ◐

Hardiness Zone: 8b

Other Names: syn. Hibiscus huegelii

Description:

A prolific bloomer presenting large lilac-blue flowers all season, heaviest in spring; a perfect evergreen shrub for containers, borders, or as a hedge in warmer climates; an interesting summer annual in colder zones

Ornamental Features

Santa Cruz Lilac Hibiscus features bold lilac purple cup-shaped flowers with blue overtones and white eyes along the branches from early spring to late winter, which emerge from distinctive purple flower buds. It has green evergreen foliage. The crinkled lobed leaves remain green throughout the winter.

Landscape Attributes

Santa Cruz Lilac Hibiscus is a multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Santa Cruz Lilac Hibiscus is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Santa Cruz Lilac Hibiscus will grow to be about 8 feet tall at maturity, with a spread of 6 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Santa Cruz Lilac Hibiscus makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
