Height: 8 feet

Spread: 8 feet

Sunlight:

Hardiness Zone: 6a

Other Names: Laceleaf Japanese Maple

Group/Class: Dissectum

Description:

This wonderful small feature tree possesses fine ferny foliage with phenomenal pink and cream variegation that persists all summer; a great choice for a solitary accent in the garden, or a patio container

Ornamental Features

Hana Matoi Cutleaf Japanese Maple is primarily valued in the landscape or garden for its cascading habit of growth. It has attractive pink-variegated green foliage with hints of creamy white which emerges pink in spring. The small deeply cut ferny palmate leaves are highly ornamental and turn outstanding shades of orange, scarlet and crimson in the fall.

Landscape Attributes

Hana Matoi Cutleaf Japanese Maple is a multi-stemmed deciduous shrub with a shapely form and gracefully arching branches. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Hana Matoi Cutleaf Japanese Maple is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use
- Container Planting

Planting & Growing

Hana Matoi Cutleaf Japanese Maple will grow to be about 8 feet tall at maturity, with a spread of 8 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 80 years or more.

This shrub does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Hana Matoi Cutleaf Japanese Maple makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
