Candy Corn Plant

Cuphea micropetala

Height: 3 feet

Spread: 4 feet

Sunlight: ○ ◐

Hardiness Zone: 9b

Other Names: syn. Cuphea melvilla

Description:

A fast growing, evergreen shrub with unusual tubular flowers that emerge yellow and then develop red coloring at the bases, resembling candy corn; flowers from late summer to late fall; a great garden accent or container plant

Ornamental Features

Candy Corn Plant has racemes of yellow tubular flowers with red overtones at the ends of the branches from late summer to late fall, which are interesting on close inspection. It has dark green foliage with creamy white veins and tinges of red which emerges light green in spring. The glossy pointy leaves remain dark green throughout the winter. The crimson stems are very effective and add winter interest.

Landscape Attributes

Candy Corn Plant is an open multi-stemmed evergreen shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard. It has no significant negative characteristics.

Candy Corn Plant is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Candy Corn Plant will grow to be about 3 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years.

This shrub does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This species is not originally from North America.

Candy Corn Plant makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
