Height: 24 inches

Spread: 20 inches

Spacing: 24 inches

Sunlight: ○

Hardiness Zone: (annual)

Group/Class: Sweet Bell

Description:

The ideal variety for large patio containers and gardens; producing high yields of fruit that emerge light green and matures to golden yellow; 3" long, thick walled bells are well balanced with a mild sweet flavor is great for salads, snacking or stuffing

Edible Qualities

Golden Bell Pepper is an annual vegetable plant that is typically grown for its edible qualities, although it does have ornamental merits as well. It produces light green peppers (which are technically 'berries') with yellow flesh which can be harvested at any point. The fruit will often fade to gold over time. The peppers have a sweet taste and a crisp texture.

The peppers are most often used in the following ways:

- Fresh Eating
- Eating When Cooked/Prepared
- Cooking
- Baking
- Freezing

Planting & Growing

Golden Bell Pepper will grow to be about 24 inches tall at maturity, with a spread of 20 inches. When planted in rows, individual plants should be spaced approximately 24 inches apart. This vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant can be integrated into a landscape or flower garden by creative gardeners, but is usually grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America.

Golden Bell Pepper is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
